

Redirect instellen

Scenario 1: Redirect op www.domein.tld

Zorg ervoor dat het domein in kwestie aangemaakt is in het CP.

Log in op CP en ga naar kopje **Domains** en druk op **Add**

Zodra het domein gekoppeld is. Ga naar kopje **Hosting** en druk op **Add**.

Domains

Email →

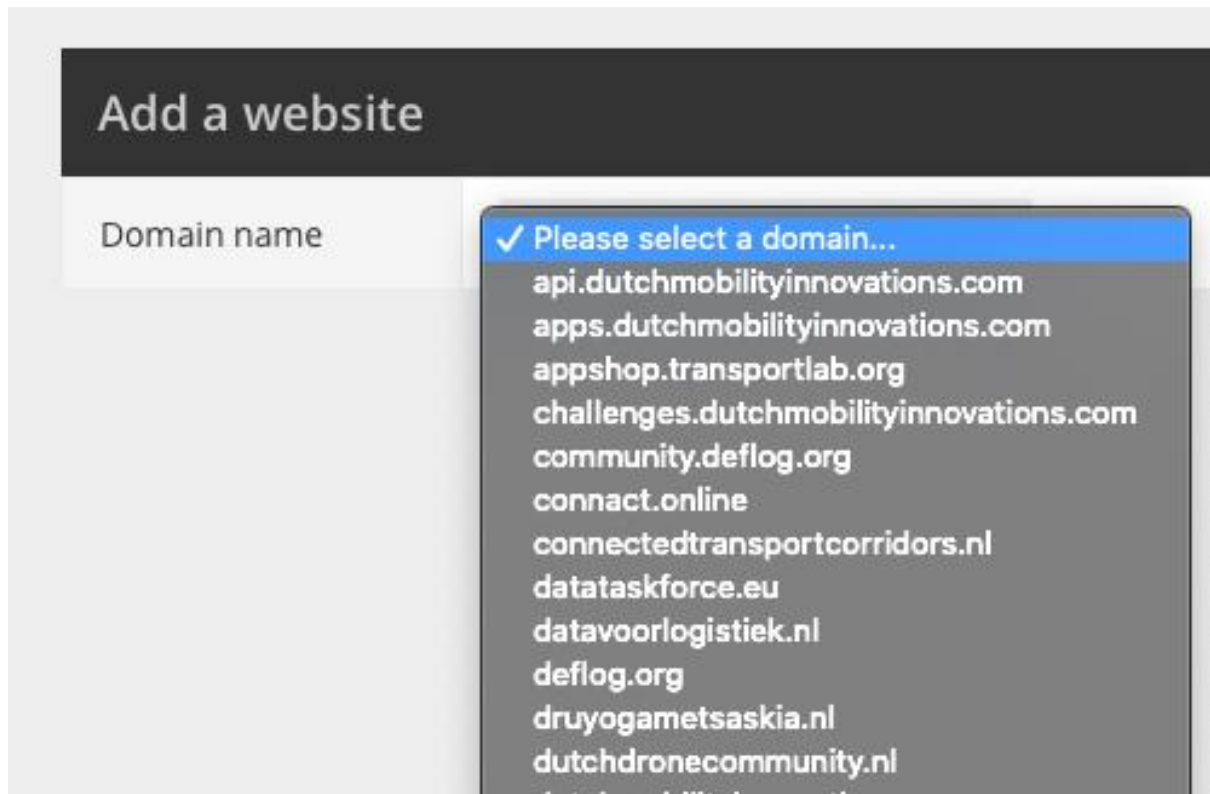

Hosting

vm6277

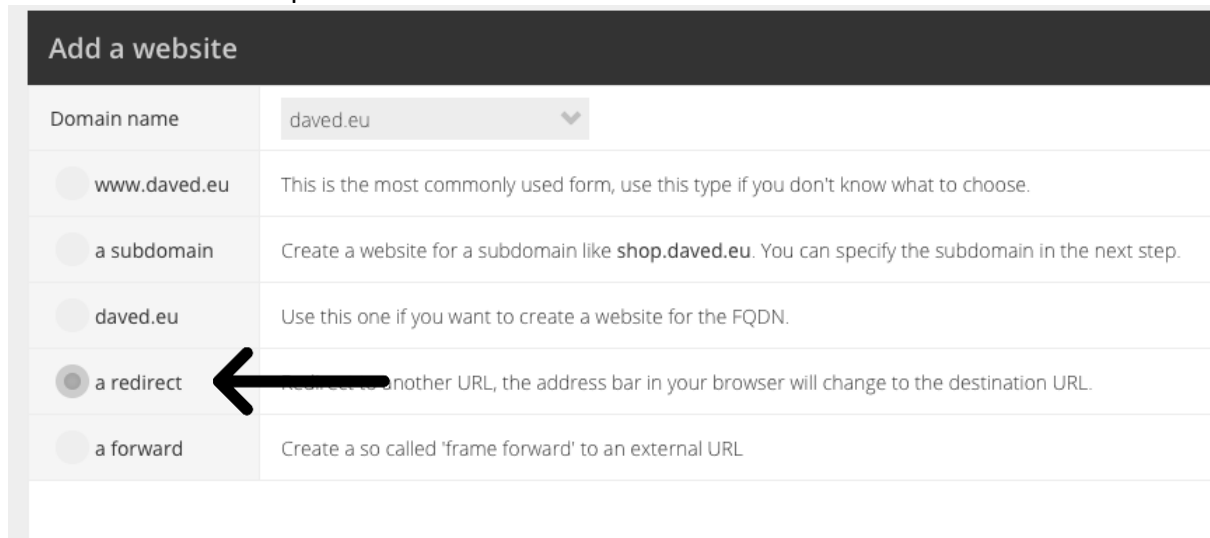

The screenshot shows a user interface for managing domains. At the top, there are navigation options: 'Domains', 'Email' (with a right-pointing arrow), 'Hosting', and 'vm6277' (with a hamburger menu icon). Below this is a large grey rectangular area containing a list of domains. The first item in the list is a dark grey bar with the text '#29' on the right side. Below this bar are three empty white rows, each separated by a thin horizontal line. At the bottom of the list area, there is a right-pointing arrow, followed by two orange buttons labeled 'Add' and 'Search'.

Kies dan het domein dat een redirect moet krijgen.

Kies dan de redirect optie.

En druk op **Next**

Add a website

Website	daved.eu
Type	Redirect
Aliases	www.daved.eu
Destination	http://

Vul hierbij de juiste gegevens in en druk op **Add**.

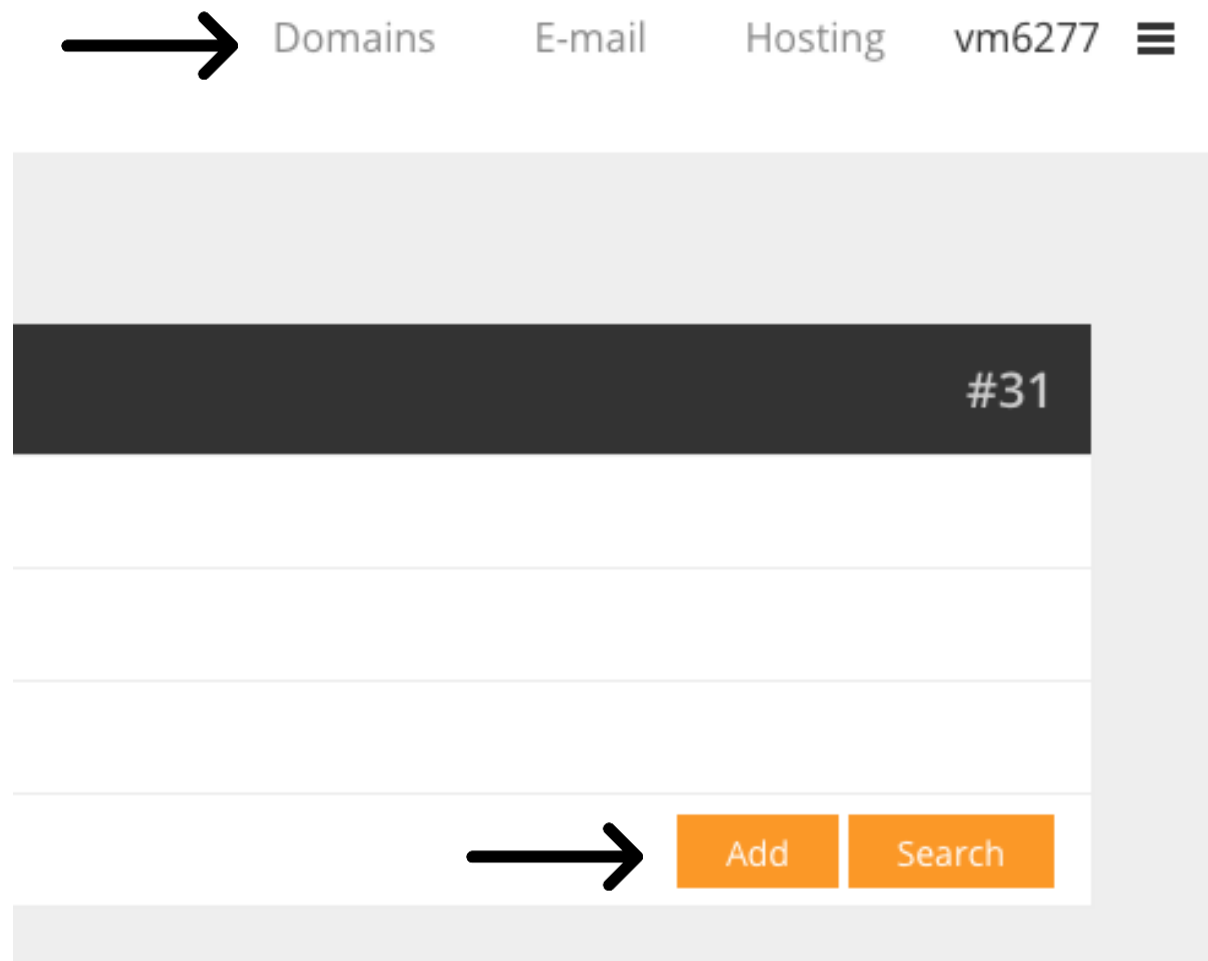

De vHost wordt nu aangemaakt die de redirect zal waarmaken.

Scenario 2: Redirect op subdomain.domain.tld

Log in op CP en ga naar kopje **Domains** en druk op **Add**

Let op dat je hierbij dus volledig subdomein gebruikt, dus subdomein.domein.tld

Dit is nodig omdat je anders mogelijk je volledige hoofddomein gaat redirecten i.p.v. enkel een subdomein. Met als gevolg dat je gehele site eruit kan liggen.

Zodra het domein gekoppeld is. Ga naar kopje **Hosting** en druk op **Add**.

vm6277

The screenshot shows a user interface for managing domains. At the top, there are navigation options: 'Domains', 'Email' (with a right-pointing arrow), 'Hosting', and 'vm6277' (with a hamburger menu icon). Below this is a large grey rectangular area representing a list of domains. The top item in the list is highlighted with a dark grey background and contains the text '#29'. Below this item are three empty rows, each separated by a thin horizontal line. At the bottom of the list area, there is a right-pointing arrow, followed by two orange buttons labeled 'Add' and 'Search'.

Kies dan het domein dat een redirect moet krijgen.

Add a website

Domain name

✓ Please select a domain...

api.dutchmobilityinnovations.com
apps.dutchmobilityinnovations.com
appshop.transportlab.org
challenges.dutchmobilityinnovations.com
community.deflog.org
connect.online
connectedtransportcorridors.nl
datataskforce.eu
datavorlogistiek.nl
deflog.org
druyogametsaskia.nl
dutchdronecommunity.nl

Kies dan de redirect optie.

Add a website

Domain name

test.daved.eu

- www.test.daved.eu This is the most commonly used form, use this type if you don't know what to choose.
- a subdomain Create a website for a subdomain like **shop.test.daved.eu**. You can specify the subdomain in the next step.
- test.daved.eu Use this one if you want to create a website for the FQDN.
- a redirect  Redirect to another URL, the address bar in your browser will change to the destination URL.
- a forward Create a so called 'frame forward' to an external URL

En druk op **Next**

Add a website	
Website	test.daved.eu
Type	Redirect
Aliases	www.test.daved.eu
Destination	<input type="text" value="http://google.nl"/>

Vul hierbij de juiste gegevens in en druk op **Add**.
De vHost wordt nu aangemaakt die de redirect zal waarmaken.
