You cannot attach an image to a button. And a content list widget will only link directly to the content that is shown. You could however use the Raw HTML widget and do something like the following.

```
<a href="files link">  
  
 </a>
```

Note that the files link will already include your communifire homepage. For example if you had that link here to this case, you would only link `"/spaces/77/communifire-support/cases/case/31865"` not the full address including `my.axerosolutions`.

This way you can also easily customize the size and style of the image you are adding.
