

# US to EU CSV files

Versie 1

Gepubliceerd 12-jan-16 16:29 door [Paul Swaak](#) Laatst bijgewerkt 12-jan-16 16:29 door [Paul Swaak](#)

---

- In Excel 2010, select Data, then "From Text" in "Get External Data"
- It opens a file selection window; select the CSV file you want to open, click "Import"
- For file origin, select "65001: Unicode (UTF-8)" - click next
- leave "Tab" as the delimiter and click next
- click "Advanced" and select the comma for decimal separator and period for thousand separator - click finish

The idea here is to get this macro to the clients so they can run it instead of the steps above every time the want to open a file with US formatted data.
